Air Playit – Streaming Video Music to iPhone iPad iPod Touch and Android device. Access Your Video & Music Library Anywhere.

Please visit <http://www.airplayit.com> to free download and install Air Playit server.

Description:

Air Playit is a video streaming & player app, which is designed to streaming videos audios to iPhone, iPad, iPod touch and Google Android device.

Air Playit is capable of streaming and playing 320 different video & audio formats on your devices via WiFi and 3G/4G network.

It acts as your personal audio video cloud server & player, and lets you watch videos on the go.

=====

Main Features:

=====

* Live Convert and Streaming Videos

Air Playit is able to convert videos on the fly and stream videos to your devices. Play MKV, AVI, WMV videos on your iPhone iPad and Android immediately without doing any tedious converting beforehand.

* Offline Conversion and Download to your iPhone iPad

With offline task manager, you can add and manage video conversion tasks on your mobile device, and download the videos to your devices over air. Watch the videos later when you have no network connection.

* Streaming Audio and Auto Cache Music Library

Air Playit automatically caches all playing music stream to files. Play the cached music without using WiFi/3G/4G bandwidth. Support MP3, AAC, AIFF, WAV audio formats.

*** Built in HTTP Server**

The built-in HTTP server lets you access the audios and videos stored on your PC or Mac via any web browser. Air Playit Server supports M3U playlist format. Play the streaming video via VLC or Apple QuickTime player.

*** Support Apple TV-Out**

Air Playit supports Apple TV-Out so that you can easily stream video & music to TV via iPhone iPad.

=====

iOS 4.2.1 and above.

=====

What's New in iOS 1.8.0:

=====

- a. Enable hardware encoding of Air Playit Server with CUDA.
- b. Support Multi-tasking Music Background Playback; guarantee smooth playing even in case of screen lock.
- c. Download music file directly to local device without the need of playing, also applied to downloading video in the computer
- d. Improved H.264 + AAC encoding speed and image quality.
- e. Fixed Bonjour discovery service, basically avoided the failure in finding Air Playit Server.
- f. Optimized automatic synchronous video conversion module, improved both the efficiency and image quality; make iPhone and iPad support 1080P more easily.
- g. Optimized the module for connecting Client to the Server to facilitate remote server connection via 3G network.
- h. Fixed the way of managing user permission of Server so that only Admin can change server PIN.
- i. Fixed a bug in server connection.
- j. Made big changes in iPhone iPad Client, and solved most feedback problems.
- k. All users of Air Playit have the rights to update to V1.8.0 and install the latest version of Server.

I. This is the most important upgrade of all upgrades and updates.
